Health and safety principle of the university of Tokyo

The University of Tokyo recognizes that the health and safety of teachers, students, and all other people who engage in learning and businesses in the university is a foundation of the university’s activities. We stipulate the “Health and safety principle of the university of Tokyo” to ensure, maintain, and improve a safe and comfortable educational, research, and work environment. We will inject the required resources and take other necessary measures to operate continuously based on this principle.

Basic policy for health and safety of the University of Tokyo

1. Develop a system to promote health and safety, and clarify responsibilities.
2. Identify the health and safety risks to teachers, students, and public during business and learning activities in the University of Tokyo, and evaluate them in a scientific manner.
3. Take appropriate measures, including the monitoring of health and safety status, to prevent the above risks.
4. Communicate information of the above risks and preventive measures to individuals, groups, and relevant organizations in an appropriate manner.

5. Comply with the laws that apply to business and learning activities in the University of Tokyo, and stipulate and apply necessary standards.

6. Cooperate with related government agencies and academic institutions to establish proper laws and standards for health and safety activities with scientific validity.

7. Take proper measures to manage and protect individual data and other information that are collected for the health and safety control.

8. Evaluate the compliance with the “Basic policy for health and safety of the University of Tokyo” and the activities of health and safety control.
